SUMMARY

Computer Science undergraduate with hands-on experience building full-stack applications, backend APIs, and data-processing workflows using Python. Developed projects involving AI-assisted tools, OCR workflows, REST APIs, and trading strategy frameworks. Comfortable working across the stack – from database design to frontend interfaces. Eager to contribute to real-world projects, follow engineering best practices, and grow in a structured team environment.

SKILLS

Languages: Python, Java, SQL, TypeScript
Backend & APIs: FastAPI, Flask, Express.js, REST APIs
Frontend: React, Next.js, TailwindCSS, HTML, CSS
Databases: PostgreSQL, Firebase, Supabase, Redis
Tools & Platforms: Git, Docker, Linux CLI, n8n
Core Concepts: OOP, SDLC, API Integration, Debugging, Data Processing, Automation

EDUCATION

GITAM University, Visakhapatnam	Expected June 2026
B.Tech in Computer Science and Engineering	CGPA: 8.79

EXPERIENCE

AI Engineer Intern – Kodryx AI	June 2025 – October 2025
- Built and maintained automation workflows and data-processing pipelines using n8n for internal AI operations. - Assisted in dataset preprocessing, validation, and structured data transformation tasks. - Debugged workflow failures, identified root causes, and improved reliability of automated processing tasks. - Integrated APIs and backend services to support operational workflows and reduce manual processing effort.	

PROJECTS

Bill Splitter Pro	React, Express.js, PostgreSQL, TypeScript, OpenAI APIs
- Built a full-stack bill-splitting application with receipt scanning, GST-aware calculations, and settlement tracking. - Integrated OpenAI vision APIs to extract itemized bill data from uploaded receipt images via OCR workflows. - Developed RESTful backend services with schema validation, shared TypeScript models, and structured API responses. - Implemented clean component architecture on the frontend with reusable UI patterns and consistent state management.	
AI Insurance Advisor	Next.js, TypeScript, TailwindCSS, Gemini APIs
- Built an AI-assisted health insurance comparison platform with a rule-based policy recommendation engine. - Designed scoring logic to rank policies based on coverage, claims reliability, waiting periods, and feature matching. - Integrated Gemini APIs to generate plain-language policy explanations while keeping recommendation logic auditable. - Delivered structured comparison workflows and scoring breakdowns to support informed user decision-making.	
TradeSim: Strategy Backtesting Framework	Python, Flask, Pandas

- Built a Python-based trading strategy backtesting framework with configurable moving-average crossover strategies.
- Implemented risk-management controls including stop loss, take profit, and drawdown limits.
- Developed a Flask web UI for strategy configuration and historical performance visualization.
- Generated time-series charts and CSV reports from historical market data for analysis and review.

ACHIEVEMENTS

Finalist – DIGIPOL Hackathon, Visakhapatnam	October 2025
2nd Place – Shore CTF (50+ teams), GITAM University	February 2025
Lead of Documentation – CHESS SIG, GITAM University	

CERTIFICATIONS
